LWP needs residents’ help to keep streetlights working

Roughly 6,000 streetlights throughout the City are installed, operated and maintained by Loveland Water and Power (LWP). In order to maintain these streetlights, the electric department repairs on average more than 80 streetlights each month. LWP would like to make sure Loveland’s lights are turned on to promote safety for drivers and pedestrians.

The street address and closest major cross streets to the pole – example: 1234 Taft, Northeast corner of Taft & Hwy 34

• The problem such as burned-out light, during darkness, blinking or off, damaged pole (leaning, tipped over), broken glass, etc.

There are two ways to report a malfunctioning streetlight. You can report them electronically or by calling 962-3000.

Public works divisions come together with $15M service center expansion

Loveland’s growth over the past five decades has been matched, in terms of scale and pattern, by the growth of its Public Works Department. The time for consolidation has arrived with the opening of the $15 million Service Center. Just as the City has spread out, with new residents and businesses pushing 8a limits north, south, west and east, the 140+ employees in Loveland’s fastest growing and most diverse City department have found workspaces all over town.

The efficiency we gain in one roof will bring City engineers, solid waste specialists, stormwater systems managers and department administrators together under one roof.

There they join fellow Public Works employees who manage and maintain the City’s fleet of more than 700 vehicles at the famous just off First Street east of Wilson Avenue.

This creates opportunities for increased communication within our department, by putting people who work closely together in one place,” Mr. Works business services coordinator, Jodi Leissman said. “The efficiency we gain in one roof will bring City engineers, solid waste specialists, stormwater systems managers and department administrators together under one roof. The City of Loveland recently added 87 acres to its open space holdings, preserving a scenic tract at the northeast quadrant of Taft Avenue and 33rd Street. This property, which was previously used for the construction of a new building, is intended for future use as a public park. The architectural firm RNL was chosen as the design firm to create a park that will provide a natural setting for the city's residents.

Energy-saving features of the new building include a green roof, recycled materials, and a rainwater harvesting system. The building's LEED Gold rating is a testament to the city's commitment to sustainable design and construction.

The cost of the project was approximately $10 million, with the majority of the funding coming from a bond issue. The city has also partnered with the Larimer County Open Lands program to protect the site's natural resources.

The new park will feature a variety of amenities, including a nature center, a playground, and a picnic area. The park will also serve as a habitat for local wildlife and a place for residents to enjoy the outdoors.

The City of Loveland and Larimer County are committed to preserving and protecting the open spaces that make our community unique. The addition of this new park is a testament to our commitment to providing residents with opportunities to connect with nature and the outdoors.

For more information, please contact the City's Open Lands Division at 962-3319 or visit cityofloveland.org/openlands.
