Keep your holidays merry by keeping fats, oil and grease out of the drain

How to avoid F.O.G. build up this holiday season

- Place waste oil and grease into a suitable container after it has cooled.
- Use a paper towels to wipe oil and grease from fryer or other waste disposal.
- Scrape all food waste into a lined trash can.
- Take liquid F.O.G. and place it into a cinder block or other container for later disposal.
- Place waste oil and grease into a suitable container after it has cooled.
- Use a paper towels to wipe oil and grease from fryer or other waste disposal.
- Scrape all food waste into a lined trash can.
- Take liquid F.O.G. and place it into a cinder block or other container for later disposal.
- Place waste oil and grease into a suitable container after it has cooled.

Keep your holidays merry by keeping fats, oil and grease out of the drain

Toilet leaks mean gallons of water wasted and money down the drain

The first step to creating a water-efficient home is to check for leaks. Studies show that dripping faucets, leaky toilets and other futile valves account for as much as 47% of all indoor water use.

Leaks are wasteful – and expensive. Every myriad drop that trickles down the drain will show up on your water bill! Additionally, leaky toilets also will pay higher energy bills. Luckily, most leaks are easy to fix. The key is to find it in time to repair.

The biggest source of leaks in the home is the toilet. If you can’t see if there is a problem, try flushing the toilet. If the water continues to run, it’s time to call a plumber. Many leaks are difficult to detect. The easiest way to check for these slow leaks is

SNOW:

Snowflakes of 1/2 inches or more will typically begin to accumulate streets of Colorado Front Range cities. Snowfall above 1/2 inches is typical in the fall through every neighborhood. “It’s a tradeoff,” Browder said. The practice opens up a single lane, allowing mobility in and out of Loveland neighborhoods.

It is not a perfect solution, as residents tell the City. Citizens often have to punch through snowfalls of 2 inches or more. High winds make snow challenging. “We’re lucky, in this region, to have the benefits of bright, high-altitude sun and usually low humidity in the absence of most midwinter snow dumps with temperatures. The response by Public Works, Water and Power, Parks and Recreation, functions provided by the City of City streets, facilities, arterial roadways. Parks and Recreation, City-owned properties.

•11 trash trucks mounted with snow plows, spreaders
•3 trucks with snow plows, spreaders, towed by pickup trucks
•3 large tractors with snow blades for city streets, curbs-to-curb after typical snows of 2 inches trigger

Rare exhibit featuring iconic 20th century artists lands at Loveland Museum

The Loveland Museum is known for bringing world-class art to Loveland. That tradition continues this fall with an exhibition of iconic 20th century artists. The exhibition features the works of renowned artists including Pablo Picasso, Marc Chagall, Henri Matisse, Joan Miro, Salvador Dali, Yves, Pierre-Auguste Renoir and Henri Matisse.

The exhibition, rarely on public view, contains more than 90 individual pieces of art that are being shared with the public by a private collector. Included are lithographs, etchings, linocuts and ceramics addressing a wide variety of subject matter in several artistic styles.

For many Loveland residents, the opportunity to see works by the likes of Picasso, Chagall and Matisse is a once-in-a-lifetime opportunity, as exhibitions of this magnitude generally bypass smaller communities for larger metropolitan cities such as New York City, Boston, Chicago and Los Angeles.

Acquired over decades

Our collections, which are sometimes美术, began collecting art in the 1970s. Over the past 35+ years, he has built a collection of world-class art that is quite considerable.

We can’t talk to the city’s more than 60,000 residents about current resources and it wouldn’t make good fiscal sense to invest in that for us. Therefore, our Loveland doorman (each resident), who helps and lends a helping hand to a neighbor—that’s what keeps the city going.

SNOW removal
Snow removal plans change during inclement weather. We strive to keep our streets safe and clear.

•1 large Snow Blower mounted on a Front Loader
•1 small Sidewalk Clearing Machine with snow blower
•2 large tractors with snow blades for driveways to the open lane.

•11 trash trucks mounted with snow plows, spreaders
•3 trucks with snow plows, spreaders, towed by pickup trucks
•3 large tractors with snow blades for city streets, curbs-to-curb after typical snows of 2 inches trigger

Lowell-old vision says a snow of 1/2 inches trigger action on every street in every neighborhood. When snowfall exceeds 1/2 inches, the City plows entire streets curb-to-curb after typical snows of 2 inches trigger.

Keep your holidays merry by keeping fats, oil and grease out of the drain

Keep your holidays merry by keeping fats, oil and grease out of the drain.

Toilet leaks mean gallons of water and waste money down the drain. The first step to creating a water-efficient home is to check for leaks. Studies show that dripping faucets, leaky toilets and other leaky valves account for as much as 15% of all indoor water use.

Leaks are wasteful— and expensive. Every drop of water that trickles down the drain will show up on your water bill, and a leaky toilet can also waste high-energy bills. Luckily, most leaks are easy to fix. The key is to find the time to repair them.

The biggest source of leaks in the home is the toilet. If you are tracking through your toilet tank, look for a cracked or chipped flush handle or a broken flush lever. These are difficult to detect. The easiest way to check for these slow leaks is to avoid using the garbage disposal near the sink, to avoid overflow, and to avoid using large soapsuds. To check for leaks, try adding some food coloring into the toilet's flapper well. Replacing a leaky flapper will save you money (see page 2).

Toilet leaks mean gallons of water and waste money down the drain.

Usage:
- Avoid using the garbage disposal near the sink.
- Avoid overflow.
- Avoid using large soapsuds.

To check for leaks, try adding some food coloring into the toilet's flapper well. Replacing a leaky flapper will save you money.
