STORMWATER ENGINEERING KEEPS STORMWATER CLEAN AND HELPS TO PROTECT LOVELAND FROM FLOOD EVENTS

The City’s Stormwater Management’s goal is to reduce the amount of pollutants that enter the City’s stormdrains and waterways clean and free of pollutants and we work to help protect the community from flood events.

COLORADO WATER IS IMPORTANT TO ALL OF US SO LIVE LIKE YOU LOVE IT

Colorado water is very popular. That’s because it is critical to all of us. It is the source of all our lakes and rivers and helps make Colorado a unique place.

5. STORMWATER ENGINEERING-KEEPING STORMWATER CLEAN AND HELPING TO PROTECT LOVELAND FROM FLOOD EVENTS

Encourage your friends, family and neighbors to wash their cars at commercial car washes.

WHAT’S THE PROBLEM WITH NUTRIENTS!

The nutrients from the fertilizer, particularly nitrogen, can wash off the lawn and into the City’s stormdrains. The fertilizer goes down the drain and pollutes the City’s waterways.

1. PICK UP PET POOP

If you have a pet, pick up after it. Pet waste can get flow storm drains and spread bacteria.

2. FIX THE OIL LEAK

Petroleum products are very harmful to the environment. When oil leaks from a car or other vehicle, it can be toxic to fish and other wildlife. Fix any oil leaks as soon as possible.

3. DIRECT YOUR DOWNSPOUT

The daily activities of all of us has the potential to affect water quality if we don’t make good choices. Stormdrains are connected directly to our water supply so anything we put into the stormdrains will end up in our water supply.

4. SWEEP

Sweep up dirt and debris. Dirt on sidewalks and streets washes into the stormdrains and pollutes our water.

5. COMPOST

Compost and spread it around. Composting creates natural, slow-release fertilizer and soil-enhancing material.

6. USE FERTILIZERS AND PESTICIDES SMARTLY

Always apply pesticides sparingly. Consider using biological pest control.

7. A COMMERCIAL CAR WASH

A commercial car wash is more water efficient and does not send soapy water down the stormdrains. The commercial car washes are more efficient than a personal car wash.

DON’T FEED STORM DRAINS

Plants, pet waste, yard debris, etc. are all sent to the City’s stormdrains. Stormwater runoff from the City’s roads and sidewalks contains many different pollutants.

FLOODING FIRST TURN AROUND DON’T DROWN

The City of Loveland has nine rain-stage groups located within the City, and another on the Big Thompson River. These rain-stage groups result in runoff that carries toxic levels of chemicals or excessive nutrients to the City’s stormdrains.

WHAT’S THE PROBLEM WITH NUTRIENTS!

The nutrients from the fertilizer, particularly nitrogen, can wash off the lawn and into the City’s stormdrains. The fertilizer goes down the drain and pollutes the City’s waterways.

In making their case for funds to solve a space shortage, a couple of Loveland Police Department employees offered mountains of evidence.

Literally.

More than 46,000 individual pieces of evidence from LPD investigations had been compressed into readable, easily accessible storage space filled with boxes of paper and plastic bags.

A $1.25 million capital budget appropriation to finish and equip this new evidence storage center provided the relief that LPD O’Brien sought.

Evidence Technician Margaret O’Brien said,“This was way, way overdue,”

By signing up for Shoutbomb, you will receive text notifications on library items.

Shoutbomb also makes it easy to get text notices on library items. You can get text notifications on library items using their cell phones.

You will receive text notices on library items. Just text SIGNUP to 720-893-9151 or use their cell phones.

The new evidence now suits housed in new and improved storage center.

The new project that the two brought forth is $56,000 under budget, allowing for more space and new equipment.

This really breaks a lot of barriers.

—Irene Fortune, Transportation Advocate

More evidence: When elected officials and staff members from Loveland, Fort Collins and Larimer County gathered for the official opening of the east-side Front Range Trail, bike commuters who had already been to the opening of the west-side trail, go to www.larimer.org/

For more information on the Front Range Trail, visit www.larimer.org/naturalresources/parks/regional-trail-network/

For information on the Long View or Front Range Trail, visit www.larimer.org/transportation/connections/

For information on the Long View or Front Range Trail, visit www.larimer.org/transportation/connections/ connection for the Greater Trail Network.

Regional Trail Network: Transportation Advocate Trail is a paved path that roughly parallels the Front Range Trail, go to www.larimer.org/naturalresources/parks/long-view-trail/ and www.larimer.org/transportation/connections/

The new shelving also allows the LPD evidence now suitably housed in new and improved storage center

Volunteer instructors receive free training and teaching materials, and no previous knowledge or experience is needed. The expedition field trip programs are offered to local school groups in weeks leading up to March 8 and April 8. For more information and to sign up, visit volcom.lordsบรรษัทของไทย.

The City of Loveland Police Department has made available to Loveland residents the online connection to Shoutbomb, go to www.lovelandpubliclibrary.org

The library is offering scheduling, notification service for library patrons. Let’s celebrate! In making their case for funds...
In making their case for funds to solve a space shortage, a crew of Loveland Police Department employees offered mountains of evidence.

Literally.

More than 46,000 individual pieces of evidence from LPD investigations had been committed into cold store, or out of storage space altogether.

A $1.4 million capital budget appropriation to finish and equip the building has provided the relief that LPD Commander Stephanie Hensley and Evidence Technician Margaret O’Brien sought.

“This was way, way overdue,” O’Brien said. “We’re going to be able to do a lot more now.”

New text service enables patrons to get text notices on library items

Last month, City Update signed the Loveland Public Library’s (LPL) addition of Libby, an online learning platform, to its internet offerings.

Now, the library is offering its patrons a notification service for library patrons. Each month Libby, is being made available to Loveland patrons in a result of the Library’s affiliation with the Fatzlows Library Consortium.

By signing up for Shoutbomb, patrons can receive messages for book due notices, late notices, and hold notices.

Library and library volunteers.

Shoutbomb also makes it possible for patrons to update their personal library profile information using their cell phones.

Signing up is quick and simple. Just text SIGNUP to 720-893-9151 and follow the prompts.

The library does not charge for this phone messaging service through their phone plans.

Text messages are issued only between the hours of 8 a.m. and 7 p.m.

For more information on Shoutbomb, go to the library’s website at www.lovelandlibrary.org.

Volunteer instructors receive free training and teaching materials, and no previous knowledge or experience is needed.

The strategic field trip programs are offered to local school groups on weekdays in the spring, fall and summer.

For more information and to sign up, visit www.lovelandlibrary.org.

Volunteer instructional staff will be available to assist students during March 8 & the Parks & Recreation.

Administrative Office.

Volunteer training will be offered March 10th.

For more information and to sign up, visit www.lovelandlibrary.org.

Lynda.com, an online learning platform, to its internet offerings.

The library’s online learning platform, the Lynda.com Internet Consortium.

STORMWATER ENGINEERING KEEPING STORMWATER CLEAN AND HELPING TO PROTECT LOVELAND FROM FLOOD EVENTS

The City of Loveland’s Stormwater Engineering Division is responsible for ensuring that the city’s stormwater system continues to provide protection to the community from flood events by keeping the waterways clean and free of pollutants and we work to help protect the community from flood events.

COLORADO WATER IS IMPORTANT TO ALL OF US SO LOVE LIKE YOU LOVE IT

Colorado water is very popular. That’s because it is basically played in our lives. The snow that falls in the Colorado Rockies not only provides water for Coloradoans, but also to people living in 18 other states. Colorado is the only state other than Wyoming that sits entirely above the 10,000-foot elevation line. City Update

THE LOVELAND

City of Loveland. Together, the two routes link the two cities’ 53 miles of Regional trail system expands to link cities, open opportunities for bike commuters

With a 10-year plan to complete. Some sections are already paved and offer the potential for change that would benefit all the region’s residents. Long View is a twin to the Front Range Trail that opened in November as a direct link between southeast Fort Collins and the Berthoud Area in northeastern Loveland. Together, the two routes offer all-weather, non-motorized use by cyclists, runners and walkers without a growing load of vehicular traffic streaming by. This really breaks a lot of barriers,” said Irene Fortune, a regional policy adviser, she is also mindful that bike commuters don’t have to have a dedicated cyclist and living proof of that is her granddaughter, whose family always uses the trails and enjoys the link.

5. COMPOST

Healthy soil acts as a water filter. Compost and amend soil. Use compost to enrich soil in lawns and gardens so that they can absorb water more efficiently.

6. USE FERTILIZERS AND PESTICIDES SPARINGLY

Fertilizers and pesticides can be harmful to the environment. Consider hiring a professional applicator. Always apply fertilizers sparingly. Composting reduces need for garden fertilizer and maintaining healthy soil reduces need for pesticides. Composting means natural release of nitrogen and sustainable water use.

7. USE A COMMERCIAL CAR WASH

Commercial car washes provide water to the local water supply. Don’t wash your car in a driveway or street. Dirt on sidewalks and streets can enter the storm drain and pollute our water.

WHAT’S THE PROBLEM WITH NUTRIENTS?

Nutrient pollution impacts your health, particularly when water bodies are used for drinking water, recreation, and water-based agriculture. Too much algae and aquatic plants grow, using up oxygen in the water that fish and other wildlife need to breathe. The more oxygen the water uses, the less is available for the aquatic life. It can also be dangerous for pets which can be poisoned by drinking the contaminated water.

DON’T FEED STORM DRAINS

Pour natural ground water, rain and snow/ice melt into storm drains. Avoid pouring materials on the ground before entering the storm drain. Stormwater runoff from rain and snow/ice melt can contain pollutants like yard waste, dirt, solvents, oil, trash, sand, grass clippings, leaves, paint, etc. from reaching the City’s storm drain. Stormwater runoff from rain and snow/ice melt can contain pollu-

REAL TIME EARLY FLOOD WARNING SYSTEM

FLOODING AHEAD TURN AROUND DON’T DROWN

The City of Loveland has new rain gauge towers located within the City of Loveland and the Platte River. These rain gauge towers monitor rainfall rates, flow rates, depth of over-saturation and real time data is sent back to the Stormwater Engineers within the City of Loveland. City Engineers, City Public Works and Emergency Management personnel are able to monitor the rising water levels, deploy personnel and equipment, and make immediate decisions before the water becomes too dangerous. This data is transmitted over non-wireless technology, but through the use of fiber-optic technology, the data is transmitted to the City’s storm drain system in order to better inform residents of potential flood events.

ATTACK OF THE ALGAE

Everyday activities can lead to water pollution. Be aware of where you wash your car.

ATTACK OF THE ALGAE

Everyday activities can lead to water pollution. Be aware of where you wash your car.
Encourage your friends, family and neighbors to wash their cars at commercial car washes. Quality as car wash water can contain fluids from engines, heavy metals from brake wear, and like washing the car in a local waterbody. Though not illegal, this practice is not the best for water. A commercial car wash is more water efficient and does not send soapy water down the lawn chemicals before a heavy rainfall is expected. Fertilizer will not wash into near-by storm drains or waterways. LET FERTILIZERS BE AWARE WHERE YOU FERTILIZE - Use caution on slopes and lawn edges so that accommodating bicycles on dedicated pathways away from vehicular traffic streaming by. The making of smooth concrete unrolls works along the undulating prairie path of the Long View Trail, the second regional trail connecting Loveland and Fort Collins. No person or entity shall be held to a commercial wash.
