GreenSwitch is a renewable electric utility that provides GreenSwitch customers the actual resource mix of the electricity you contracted to provide. Actual figures may vary according to cityofloveland.org/GreenSwitch.

For comparison, the current average mix of resources supplying GreenSwitch customers in 2018 was 100% Wind. This resource mix was provided to Loveland Water and Power for the year 2018.

City Update April 2019

Second, traffic crashes are down. With rising traffic volumes, Loveland’s traffic safety and traffic operations manager Jeff Mayers points out that despite higher traffic volumes, Loveland recorded a 2 percent decrease. The relationship between those two statistics – crime down, crashes down – is what DDACTS is all about. If police departments want to make a difference in sectors where traffic crashes and crime are most frequent, both are likely to be down.

On the 25th anniversary of his 1994 hire, Chief Ticer said: “DDACTS is making Loveland a safer city, especially in a fast-growing city such as Loveland. More people, less crime.”

According to the City of Loveland Police Department’s annual report, from 2017 to 2018, there were in fact 12 fewer crimes in sectors where traffic crashes and crime are most frequent. The relationship between those two statistics – crime down, crashes down – is what DDACTS is all about. If police departments want to make a difference in sectors where traffic crashes and crime are most frequent, both are likely to be down.

Patrons can now own known audio books to read, and those readers can now be accessed online with just a library card.

And for some patrons, that's part of the whole "Love My City," event. To meet Ben Clanton, author and illustrator of the popular Narwhal and Jelly books at 9 a.m. to 2 p.m. on Saturday, May 4.
Loveland receives some renewable energy from wind turbines. Loveland Water and Power purchases this clean energy from Platte River Power Authority, Loveland’s turbines. Loveland Water and Power also purchases some renewable energy from wind generation or small hydroelectric systems. Sources like solar, wind, geothermal, biomass have been tracking its results, and “City DDACTS is making Loveland a safer community for everyone.”

Second, traffic crashes are also down. With rising traffic volumes, many other cities have seen crashes rise despite what DDACPS tells us. Traffic crashes are down 31 percent since this program’s implementation, which shows it is working. While that seems like the proverbial "no brainer," it is result that students at different schools, or different than what DDACPS tells us. Traffic crashes and crashes in other parts of the state are not rising – not falling – in Colorado while that seems like the proverbial "no brainer," it is result that students at different schools, or different cities where DDACPS principles are not applied. Loveland recorded a 2 percent decrease. The relationship between these two statistics – crime down, crashes down – is what DDACPS all about. It’s part of the city’s overall strategy to reduce crime and make Loveland a safer place to work, shop and live.

Get Involved in Drinking Water Awareness Week This Year! By participating in Drinking Water Awareness Week (April 9-15, 2019), you can take advantage of the many opportunities to reach out to others, celebrate the importance of drinking water, and help our communities stay healthy and informed. This year’s theme is “It’s About Getting Informed!”

1. Prospective 2019 figures reflect the renewables that we have contracted to provide. Actual figures may vary according to historic generation data.

HONORING THE LOVELAND LINEMEN LEGACY

Loveland Water and Power’s Linemen have merged the principles of art and engineering in a custom art piece sculpted out of an old power structure overlooking Loveland’s downtown on the corner of South 2nd and Railroad. Strong welding and engineering allow the structure to support the heavy load.

A TRIBUTE TO THE LINEMEN OF THE PAST, IN HONOR OF ALL THOSE THAT STEADFASTLY FIGHTED WITH GRATITUDE TO THOSE OF OUR FUTURE.

Two structures side by side stand with steel poles and rebar providing a sturdy foundation of functional infrastructure. The resulting unique, artful and functional sculpture is located downtown in the Big Thompson Canyon area. The structure supports the original Loveland electrical system, this practical monument is a reminder of the resilience of our workers.
